SHARON HIGBIE

Agriculture has been and remains one of Oklahoma's greatest industries and a major source of wealth. In fact, farming and ranching is second only to the combined oil and gas production industry in this State. Agriculture continues to be the economic foundation for most of our rural commodities. Only with adequate information can we assess our economic position and work toward our goals in production and marketing.

This report is made possible by farmers and ranchers who have supplied survey data on their individual operations, as well as data received from grain elevators, slaughter plants and other agribusinesses. I offer my sincere thanks to each one who voluntarily supplied information and helped insure the accuracy of these data.

Sincerely,

Jack D. Craig

Presented in this report are measures of Oklahoma's agricultural production. These agricultural statistics are based on survey responses from farmers, ranchers and agri-businesses. We wish to express our appreciation to all of the respondents who voluntarily participated in the sample survey.

The office staff who prepared these agricultural statistics are John Waldrop, Assistant State Statistician, with Agricultural Statisticians Burton Bartlett, Daryl Brinkman, James Heep, Riley Henderson, Monnie Miller, Dave Ranek, and Ramona Taylor. The program support group includes Sharon Adams, Charlotte Gamble, Terry Hughes, Judy King, Beverly Masquat, Nancy Parsons, Alberta Penix, Donna Scott, Kathy Sherfield, and Ila Mae Spiva.

This publication was assembled under the guidance of Burton Bartlett with assistance from support personnel.

Current reports and forecasts may be obtained by writing the Commissioner of Agriculture or the State Statistician.

Sincerely,

John Cochrane

John E. Cochrane
State Statistician

OKLAHOMA CROP AND LIVESTOCK REPORTING SERVICE

SAMPLING METHODS AND ESTIMATION

The data collection program of the Crop and Livestock Reporting Service consists of surveys designed to produce current agricultural statistics of acreages, yield and production of crops, livestock and poultry inventories, and other information pertaining to Oklahoma's agricultural economy.

The most important source of survey data is the farm operator who voluntarily supplies information about his farming operations. Most surveys include a fairly large sample of operators which are surveyed by mail. Some producers may be in a smaller pre-selected probability sample in which responses are collected by personal interview or by telephone.

Data are also collected from agribusiness firms and merchants serving agriculture. Both suppliers of agricultural inputs and purchasers of raw farm outputs are important sources for developing statistics on agricultural commodities. In addition, these firms can also provide valuable data on quantities marketed or processed, which are used as check data to revise earlier estimates made from sample surveys. Data from these sources are especially useful in the nonprobability mail surveys.

Survey methods have changed significantly during the past two decades and many different sampling and surveying techniques are used currently. Lists of farm operators, including names and addresses, are used for many of the surveys and are well suited for the collection of information by mail. The low cost of data collection from a list sample is one of the principal advantages of this method. Another advantage is the ease with which supplementary information can be included and used to classify operations as to type and size. This allows the use of efficient stratified sample designs.

Today, many probability surveys, using personal interviews and actual field counts to collect data, supplement the mail approach. Enumerative surveys require the collection of survey data pertaining to specific land areas (segments). In Oklahoma, a sample of 360 segments which average approximately one square mile in size are enumerated each year. The information collected is used to supplement mail surveys to provide indications on crop acreages and livestock numbers. Objective counts and measurements are taken each month throughout the growing season from 200 randomly selected wheat yield plots. This information is used to supplement indications of wheat yield provided by the mail responses from monthly crop reporters. The enumerative and objective yield field activities are conducted by approximately 40 part-time enumerators whose work helps provide information for preparing more reliable statistics.

Beginning in 1981, Oklahoma has been participating in a research project called AGRISTARS. This project is designed to determine if satellite information can be used to improve the precision of crop estimates at the state, crop reporting district and county levels. Another goal is to develop methods which will give early warning to the agriculture industry of changes in crop conditions that may affect production. The project is a cooperative effort of the U. S. Departments of Agriculture, Commerce and Interior, NASA, and the Agency for International Development.

John Waldrop,
Assistant State Statistician

U.S. CENSUS OF AGRICULTURE - OKLAHOMA FARM DATA IN BRIEF

ITEM		1974 1/	1978	1982 2/
Land Utilization

OKLAHOMA CROP—WEATHER SUMMARY

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

1983 CROP WEATHER REVIEW

January: Rains improved wheat pasture in the major-producing areas of the State; however, excess precipitation in eastern localities hampered small grain growth. Adequate forage supplies were reported in all parts of the State except central localities where reserves were generally short. Pasture in the rain-soaked northeast was plentiful but quality of the forage was low. Cattle were in good to fair condition statewide.

February: Excellent growing conditions during the last two weeks of the month improved the outlook for the 1983 wheat crop. Warm weather and good soil moisture enhanced small grain development, particularly in the south and west. Some fields in the northeast suffered from excess moisture. Continued wet conditions delayed top dressing of wheat and hindered spring planting of oats. Drying conditions were needed in eastern Oklahoma to maximize utilization of small grain pasture.

March: Cold temperatures during late-month slowed growth and development of wheat and other small grains. Wet weather hindered fertilizing activities. Weeds were a problem in most fields in the north and west with many producers spraying to control their growth. Tick and lice infestations of cattle were troublesome in the eastern third of the State.

April: Temperatures fell to a record low for the month in many parts of Oklahoma. Cool, cloudy weather slowed growth of wheat and other small grains. Wheat development was nearly two weeks behind normal by the end of the month. Good March rainfall enhanced prospects for 1983 small grain crops but warm weather was needed for proper development. Row crop activity lagged behind normal from wet fields and cool, cloudy weather.

May: Cool, wet weather retarded crop progress. Less than one percent of the State's wheat was harvested by the month's end. Severe cheat problems were reported in the major North Central wheat-producing district. Wheat harvest was one to two weeks behind normal. Pastures and ranges were in excellent condition as abundant moisture and favorable temperatures were ideal for forage growth.

June: Rainfall during the first half of June continued to delay wheat harvest. Warm, dry weather during the remainder of the month improved conditions for crop harvest. By the end of the month, half of the crop was harvested compared with 90 percent normal. Cheat grass continued to plague many North Central fields. Cotton planting, which was well behind average at the beginning of June, progressed to near completion by July 1.

July: Hot, dry weather caused minor stress on most crops. Cool nights and generally adequate subsoil moisture prevented severe crop stress. All summer crops were in good condition but needed rain to make an average crop. The abnormally late wheat harvest was near completion by mid-month. Northern counties lagged behind normal in harvesting because of weeds and wet soils.

August: Hot, dry weather caused severe crop stress to summer crops and most dryland row crops were rated in poor condition. Cotton bolls were opening prematurely from dry conditions. Dryland soybean plants were dropping blooms and some pods were drying up. Dryland sorghum needed moisture and a late harvesting season for proper development. Limited alfalfa growth reduced fourth cuttings and production. Pastures and ranges underwent considerable burning.

September: Wheat pasture prospects were greaty enhanced by much needed rainfall; however, moisture was too late to reverse earlier stress on most row crops. Freezing temperatures damaged grain sorghum in the Panhandle; however, above normal temperatures generally prevailed across the State. Pastures and ranges improved slightly, but forage supplies remained short. Cattle and other livestock were rated in good to fair condition.

October: Record monthly precipitation substantially improved wheat conditions. Washouts, silting in, and seed rotting from major flood damage in the southwestern third of the State resulted in some replanting. Corn harvest was nearly complete by the end of the month except for a few fields in the northeastern section of the State. Rains and wet fields kept row crop harvesting at a standstill in most localities during the latter part of the month. Many growers were estimating losses from the heavy rainfall. Reports were received of high cattle death losses as the Red River basin flooded.

November: Ample moisture and above normal temperatures increased small grain and pasture growth throughout the State. Heavy weed infestations were a problem in many North Central fields. Greenbug activity was on the rise but most producers elected to forego control measures until damage was severe. At the end of the month, 25 percent of the wheat acreage was grazed and most of the row crop acreage was harvested except cotton. Plant defoliation from a late-month freeze increased cotton harvest activities.

December: Record cold temperatures during late-December brought wheat into dormancy and resulted in some cattle losses. Snow cover prevented pasture grazing in many areas of the State. Very little weight gains were reported despite heavy supplemental feeding. Extremely cold weather limited insect activity which was virtually non-existent.

OKLAHOMA CROP PRODUCTION

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

1983 Crop Production

Extremely hot, dry summer weather coupled with significant acreage reductions led to a substantial decline in crop production in 1983. Sizeable cuts for most crops were directly attributed to heavy participation in the USDA's Payment-In-Kind Program. Late season crop yields suffered because of the absence of adequate precipitation during critical crop development stages. Rainfall during this period was only slightly more than half the normal amount. Small grain yields, however, were excellent and approached record levels.

The 1983 wheat crop, at 150.5 million bushels, was a third less than the record 227.7 million bushels produced in 1982 and 13 percent below 1981. A combination of 4.3 million acres harvested and a better than average 35 bushel yield produced this result. This acreage harvested was 2.6 million less than the previous year and represented only 55 percent of the 7.8 million acres planted the previous Fall.

The main exceptions to less acreage was peanuts and hay. Hay acreage increased primarily because of wheat acreage cut for hay instead of grain production. Peanut acreage jumped as grower's responded to a change in the peanut farm program which based controls on production rather than acreage.

The most noteworthy planted acreages changes were in cotton and sorghum . These crops continued the second consecutive year of sharp declines. Cotton and sorghum acreage dropped by almost a third. Soybean and corn acreage were down 17 an 19 percent respectively.

Cotton yielded a average of 232 pounds per acre; sorghum, 33 bushels per acre; soybeans, 17 bushels per acre; and corn, 112 bushels per acre. These were lower than average yields except for corn. Corn yields were excellent especially in the Panhandle. The corn crop, which is mostly irrigated, was aided by the absence of normally harsh southwest winds.

Peanut production rebounded slightly from 1982 because of more acreage. Ninety-one thousand acres were harvested with an average of 1940 pounds per acre. Total production was 177 million pounds compared to 175 million in 1982.

A 13 percent increase in hay acreage with a lower yield led to a 6 percent increase in hay production. This increased hay production was welcome as farmers and ranchers experienced one of the harshest winters on record and consequently fed heavily.

Pecan and peach production totaled 8 and 9 million pounds respectively.

TAM W-101 REMAINS TOP WHEAT VARIETY

TAM W-101 was grown on 30 percent of the 7.7 million acres of wheat seeded last fall, according to the Oklahoma Crop and Livestock Reporting Service. This compares with 36 percent at the time of the last survey in 1979 and less than one percent when it was first reported in 1973. This report was based on responses from nearly 2,000 Oklahoma farmers during a June 1 survey funded by the Agricultural Research Service and Oklahoma Wheat Commission.

The popularity of Vona and TAM 105 rose sharply since 1979 while the trend has been for fewer acres sown to the Triumph and the Scout groups. The percentage of acreage seeded to Sage, Osage, Danne, and Centurk types is also down. Significant acreage of Wings, Newton, and Payne varieties are now being grown.

OKLAHOMA WHEAT VARIETIES: PERCENTAGE OF SEEDED ACREAGE, SELECTED YEARS

Wheat hay is gaining in importance.

OKLAHOMA LIVESTOCK

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

OKLAHOMA LIVESTOCK - JANUARY 1, 1984

Oklahoma's cattle and calf inventory on January 1, 1984, increased slightly, marking the end of the downward trend in the cattle cycle. Annual average prices received in 1983 for all livestock except calves decreased from a year earlier. Compared to a year earlier, 1982 cash receipts decreased 23 percent for cattle, 30 percent for sheep and lambs and 22 percent for hogs. As a result, cash receipts from marketings of meat animals continued to decline for the third consecutive year.

Cattle and calves on Oklahoma farms and ranches totaled 5,500,000 head on January 1, 1984, up 3 percent from the previous year. The State's cow inventory totaled 2,200,000 head and was composed of 2,090,000 beef cows and 110,000 milk cows. Beef cow inventory declined 2 percent while milk cows remained the same from a year earlier. The number of calves under 500 pounds was up from January 1, 1983. The average inventory value of $305 per head gave a total dollar value for all cattle and calves on the State's 66,000 cattle operations of $1.7 billion, 5 percent below the value a year earlier.

The number of cattle and calves in Oklahoma feedlots on January 1, 1984, was 10 percent below the previous year and 25 percent below the all-time high number on January 1, 1978. Fed cattle marketings during 1983 were 3 percent above a year earlier but 24 percent below the record number marketed in 1978. Cattle and calves placed on feed during the year were down 6 percent from 1982.

Hog numbers as of December 1, 1983, totaled 290,000 head on the State's 6,000 hog operations. Total hog inventory was up 45 percent, breeding stock was down 21 percent while the number of market hogs was up 56 percent from December 1, 1982. The 1983 pig crop was 22 percent larger than a year earlier and included 179,000 spring pigs and 137,000 fall pigs. Average value per head of $57.50 resulted in a total inventory value of $16.7 million.

Sheep and lamb inventory declined for the first time in seven years. Sheep and lambs on Oklahoma's 2,400 sheep farms on January 1, 1984, decreased 2 percent from a year earlier and included 75,000 stock sheep and 40,000 sheep and lambs on feed. The 1983 lamb crop of 65,000 head was 7 percent below the previous year. Wool produced during 1983 totaled 655,000 pounds, 15 percent less than the previous year's production. The average value per head of $57.00 was below January 1, 1983 and resulted in a 12 percent decrease in total inventory value for all sheep and lambs.

Inventory, Supply and Disposition: Balance Sheet estimates; the sum of inventory on hand beginning of year. Births and inshipments equals the sum of marketings, farm slaughter, deaths and inventory on hand end of year.

Prices: State prices are as published in the February Agricultural Prices report, and are computed by weighting prices received by farmers by monthly quantities sold.

Marketings: Includes animals for slaughter market, as well as younger animals shipped to other states for feeding or breeding purposes. Excludes interfarm sales within the state and farm slaughter. Number of head marketed includes all custom slaughter but liveweight marketings shown in pounds exclude custom slaughter consumed on farms where produced.

Farm Slaughter: Animals slaughtered on farms primarily for home consumption. Excludes custom slaughter for farmers at commercial establishments.

1983 DAIRY REVIEW

Oklahoma's January 1, 1984 milk cow population totaled 110,000 head, the same as January 1, 1983. Heifers being kept for milk cow replacement totaled 35,000 head, also unchanged from a year earlier.

Milk production of 1,173 million pounds in 1983 was 1 percent above the previous year. Production per cow in 1983 was 10,664 pounds, a 2 percent increase from 1982 and the fourth consecutive year that a new record production per cow has been set. The national average production per cow in 1983 was 12,587 pounds.

The average price received by dairy farmers for milk and cream was down 40 cents from the previous year. Total cash sales decreased to $162 million compared with the previous high of $166 million in 1982. Producer returns from combined marketings of milk and cream averaged $14.16 per hundredweight, 49 cents above the national average.

Total milk and cream marketings of 1,143 million pounds in 1983 increased 1 percent from a year earlier. Of the total milk produced during 1983, approximately 97 percent was marketed. Nationally, 98 percent of the total milk produced was sold through milk handling channels. An estimated 30 million pounds of milk were used on Oklahoma farms, the same as 1982.

The quantity of whole milk (net whole milk equivalent) utilized in manufacturing dairy products totaled 496.0 million pounds in 1983, compared with 446.0 million pounds in 1982.

Production of creamed cottage cheese, at 10.0 million pounds, decreased 3 percent from a year earlier. Both cottage cheese curd and lowfat cottage cheese decreased from 1982.

Total production of frozen dairy products increased 2 percent from 1982 to 15.0 million gallons. Ice cream production was 9.9 million gallons, an increase of 3 percent from 1982. The output of ice milk increased 1 percent and milk sherbert increased 3 percent. Mellorine production decreased 15 percent to the lowest level since records began in 1952.

POULTRY REVIEW - 1983

The number of chickens, excluding broilers, on Oklahoma farms and ranches on December 1 1983, totaled 4,750,000 birds, up 1 percent from a year earlier. The average value of non-broiler chickens on December 1, 1983 was $3.30 per bird, for a total inventory value of $15,675,000. The annual average number of hens and pullets of laying age was 3,506,000, down slightly from a year earlier. Hens and pullets of laying age averaged 240 eggs per bird during 1983, compared to 232 in 1982.

Egg production during 1983 totaled 841 million eggs, up 3 percent from a year earlier. Of the total number of eggs produced, 98 percent were marketed at an average price of 74.0 cents per dozen, providing $50,998,000 in cash receipts. Home consumption of eggs was valued at $863,000, bringing the gross value of egg production to $51,861,000 for 1983.

A total of 55,230,000 commercial broilers were produced by Oklahoma farmers, up 8 percent from 1982.

Commercial hatcheries in Oklahoma hatched 1,114,000 egg-type chicks during 1983, a 2 percent decrease from the 1982 hatch.

There were 2,250,000 farm chickens (mostly old hens) sold during the year which averaged 13.5 cents per pound, resulting in sales of $1,367,000, up 46 percent from 1982. Home consumption of farm chickens was valued at $48,000 bringing the total value to $1,415,000.

During 1983, a total of 1,600,000 turkeys were raised in Oklahoma, 22 percent less than a year earlier. The average liveweight was 19 pounds per bird which accounts for 30,400,000 pounds of total production. The average price received by producers of 35 cents per pound, 2 cents less than the previous year. The decrease in production resulted in 26 percent less gross income, amounting to $10,640,000.

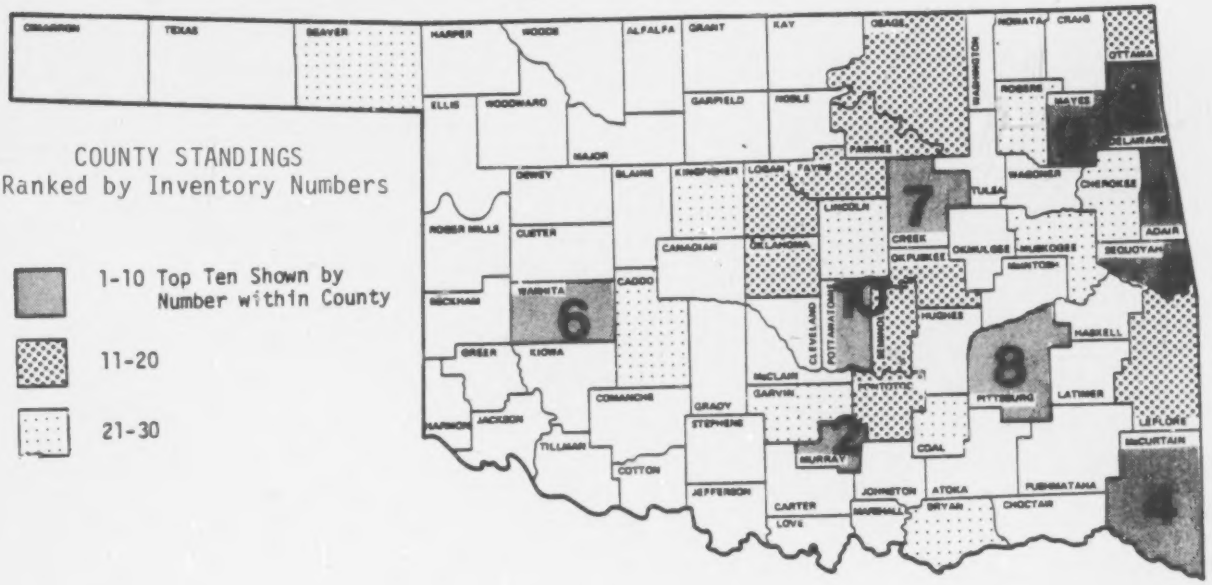
FARM CHICKENS (Excluding Broilers), OKLAHOMA, DECEMBER 1, 1983



OKLAHOMA AGRICULTURAL PRICES

Crop Reporting Board
Oklahoma Crop and Livestock Reporting Service

FARM PRICE REVIEW

The Prices Received Index for all crops averaged 134 percent of 1977 = 100 base. Winter wheat averaged $3.55 per bushel for 1983, down 10 cents from 1982's figure. Cotton lint prices increased from 1982 to 57.8 cents per pound, a 21 percent surge, while cottonseed averaged $182.00 per ton, up 156 percent. Season average prices of other crops, and the changes from 1982 were: grain sorghum, $5.20 per cwt., up 46 cents; oats, $1.85, down 30 cents; corn, $3.70, up 71 cents; barley, $2.55, up 10 cents; rye, $2.50, up 45 cents; soybeans, up $2.50 to $7.70 for the year. Peanuts were up 2.9 cents to 26.3 cents per pound while pecans dropped to 48.4 cents per pound. Alfalfa hay prices ranged from $108.00 per ton in December to a low of $67.00 in June.

Livestock prices were generally down in 1983 with cattle accounting for most of the decreases. The Index of Livestock and Livestock Products averaged 149 percent of 1977 = 100 base year. All Beef Cattle dropped for the fourth consecutive year, down 5 percent to $51.40 per cwt. Steers and heifers were down $1.50 per cwt., while cows were off 70 cents. Calves under 500 pounds brought $1.50 per cwt. more in 1983. Dairy cow replacements cost $90 less per head, averaging $1030. Prices received for milk averaged $14.00 per cwt., down 40 cents from 1982. Hog prices were off in 1983, ending up at $48.80 for the year.

Cash receipts from farm marketings totaled $2.7 billion in 1983, a 16 percent decrease from 1982. Cash receipts from sales of crops fell $106 million. Livestock and related products decreased $402 million and accounted for 63 percent of total farm receipts.

Oklahoma farm real estate values fell in 1983, posting a 5 percent decrease. The State average value for farmland and buildings amounted to $661 per acre.

1/ Revised. Details may not add to totals due to rounding.

All income derived from farm operations and Government farm programs is included in the above table. The following description of terms may be helpful in interpreting the table:

Cash Receipts from Farm Marketings - Receipts from sales, loans made or guaranteed by CCC and purchases under price support programs.

Government Payments - Those payments made to farmers in connection with programs such as Agricultural Conservation, Feed Grain, Wheat and Cotton, Disaster Payments, etc.

Non-Money Income - Includes the value of farm products consumed directly in farm households and the rental value of housing provided by farm dwellings. Expenses are included in the production expense estimates, thus non-money imputations do not add on a dollar-for-dollar basis.

Realized Gross Farm Income - The sum of the above income sources.

Farm Production Expenses - Cost of current operations (excludes new capital equipment, taxes, and rents).

Realized Net Farm Income - Realized gross income minus production expenses.

Net Change in Farm Inventories - Value of change in quantities of crops and livestock products kept on farms from one year to the next (may be a minus value).

Total Net Farm Income - Realized net income plus the net change in inventories.

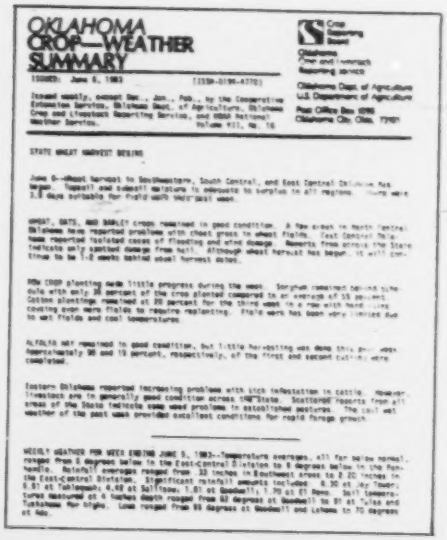
LIST OF AVAILABLE REPORTS

The Oklahoma Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices received and paid by farmers, and various other special reports. The reports containing such data and the approximate date of release are shown below. These reports are free to producers and anyone else who submits reports to the Crop and Livestock Reporting Service. Others need to subscribe by submitting a subscription form and fee. Obtain free subscriptions and/or subscription forms by writing:

Oklahoma Crop and Livestock Reporting Service
P. O. Box 1095
Oklahoma City, Oklahoma 73101

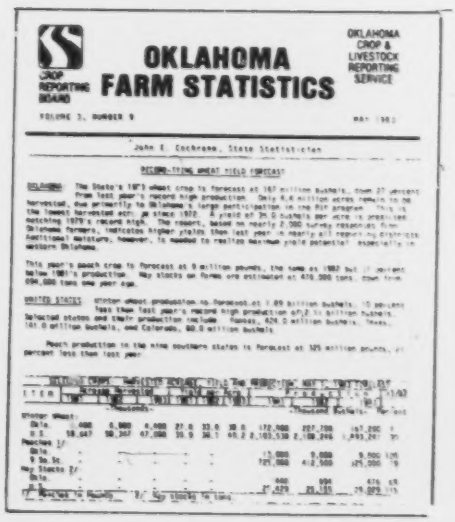


OKLAHOMA CROP—WEATHER SUMMARY

Issued weekly, except Dec., Jan., Feb., by the Cooperative Extension Service, Oklahoma Dept. of Agriculture, Oklahoma Crop and Livestock Reporting Service, and NOAA National Weather Service.

STATE WHEAT HARVEST BEGINS

WEEKLY WEATHER FOR WEEK ENDING JUNE 5, 1983--Temperature averages, all for below normal, ranged from 5 degrees below to the East-Central Division to 8 degrees below in the Panhandle. Rainfall averages ranged from .33 inches in Southwest areas to 2.20 inches in the East-Central Division. Significant rainfall amounts included: 6.30 at Jay Tower; 5.81 at Tahlequah; 4.48 at Sallisaw; 3.01 at Goodwell; 1.70 at El Reno. Soil temperatures measured at 4 inches depth ranged from 62 degrees at Goodwell to 81 at Tulsa and Tahlequah for highs. Lows ranged from 49 degrees at Goodwell and Lahoma to 70 degrees at Ada.



OKLAHOMA FARM STATISTICS

OKLAHOMA CROP & LIVESTOCK REPORTING SERVICE

John E. Cochrane, State Statistician

RECORD-TYING WHEAT YIELD FORECAST

OKLAHOMA: The State's 1983 wheat crop is forecast at 167 million bushels, down 27 percent from last year's record high production. Only 6.6 million acres remain to be harvested, due primarily to Oklahoma's large participation in the PIK program. This is the lowest harvested acreage since 1972. A yield of 34.0 bushels per acre is predicted matching 1979's record high. The report, based on nearly 2,000 survey responses from Oklahoma farmers, indicates higher yields than last year in nearly all reporting districts. Additional moisture, however, is needed to realize maximum yield potential especially in western Oklahoma.

This year's peach crop is forecast at 9 million pounds, the same as 1982 but 17 percent below 1981's production. May stocks of farms are estimated at 470,000 tons, down from 694,000 tons one year ago.

UNITED STATES: Winter wheat production is forecast at 1.09 billion bushels, 15 percent less than last year's record high production of 1.28 billion bushels. Selected states and their production include: Kansas, 424.0 million bushels, Texas, 161.0 million bushels, and Colorado, 80.0 million bushels.

Peach production in the nine southern states is forecast at 325 million pounds, 21 percent less than last year.
